CC Pace - Agile Thought Leader

cc pace

What can Agile do for your Agency?

Using an Agile framework, CC Pace will help your organization accelerate the delivery of your projects. The benefits of this framework include:

- **Tighter connection** between **IT** and **Business**
- Project **risk mitigation**
- Project delivered **on time** and **on budget,** delivering the highest value functionality first
- **Cost avoidance** through Lean waste reduction principles
- **Earlier identification** of troubled projects

Agile Thought Leader

CC Pace has been an Agile thought leader since 2000. We have been doing this longer and more successfully than our competitors! Our unique combination of Lean thinking and Agile principles is what makes us a preferred resource for a full range of development, training, coaching and mentoring services.

We hold this leader position by:

- Customizing Agile solutions to address your agency's mission, objectives and unique circumstances
- Bringing real world experience from our team of seasoned trainers, coaches and engineers
- Providing Training and Coaching to over 1,000 individuals in both the commercial and government sectors
- Serving on the Board of Directors for the Agile Leadership Network (ALN)
- Bringing additional techniques such as Lean principles
- Establishing a collaborative working environment with our clients
- Leveraging our knowledge of private sector best practices
- Delivering Results!

CC Pace Agile Offerings

The CC Pace Agile Advantage

With over a decade of experience in helping organizations adopt an Agile approach, we've established ourselves as thought leaders in the industry. We have developed and coached over 100 projects using Agile and have leveraged that knowledge to help other organizations adopt Agile. All of our coaches, trainers and technical staff are seasoned professionals with years of real-world experience. CC Pace's Agile expertise goes far beyond our listed offerings. Whether you are introducing Agile to your organization for the first time or are ready to take your team to the higher levels of Lean Thinking and the advanced engineering practices of Agile XP, our team of experts will work with you to identify the best solution to meet your needs.

Agile Training

- Agile Orientation
- Certified ScrumMaster
- Scrum Team Training
- Agile Project Management
- Product Owner
- Transitioning to Agile
- Test Driven Development

We also provide Customized Training to fit your needs.

Agile Coaching, Mentoring and Consulting

- Agile Readiness Assessment
- Agile PMO support
- Project coaching and mentoring
- Engineering Practices Adoption, e.g., XP
- Agile Processes Adoption, e.g., Scrum
- Lean thinking for team acceleration

Agile Software Development

- Custom software development
- Agile Piloting

We work with our clients to provide either co-sourced software development with their staff, or outsourced software development with our staff.

Case Study

Tri-Service Business Planning Tool (TSBPT)

The Tri-Service Business Planning Tool (TSBPT) application was created in a joint effort to generate an enterprise solution for business planning among the military's healthcare services and systems. The TSBPT assists the Military Health System (MHS) to more accurately balance allocations of funds and personnel to military treatment facilities, therefore improving healthcare delivery to members of the military and their families. Enhancements to the TSBPT are made annually and must adhere to a strictly non-negotiable delivery date.

The Solution

Knowing that Agile methods are being successfully employed in a number of government agencies to deliver software projects in a more timely manner, our client decided to engage the services of CC Pace known for their expertise in Lean Thinking techniques and Agile engineering practices for software development, for their Tri-Services Business Planning Tool Project. In collaboration with one of CC Pace's prime Agile partners, we gladly accepted the challenge.

The Results

The CC Pace Team was able to support our prime contractor with an experienced Agile developer who helped them meet their deadline for the Tri-Services Business Planning Tool Project while improving their process, with Agile techniques like Test Driven Development (TDD) and Continuous Integration (CI), to ensure prompt delivery of the tool enhancements. The team's experienced coach was able to recognize the nature of this mission critical project and provided the right balance of Agile exposure without compromising a high profile project by introducing too much change too soon. The team completed their project on time and on budget.
