

Independent Guidance that is Defensible

Where do you want to focus?

	COST	SAFETY
POTABLE	<input type="checkbox"/>	<input type="checkbox"/>
UTILITY	<input type="checkbox"/>	<input type="checkbox"/>

Phigenics is a water management company that partners with facility owners and managers, infection prevention and environmental health and safety personnel to improve the efficiency, effectiveness and overall safety of all water systems. Our independent guidance is unique, delivering cost savings, unbiased expert advice, and best practices that are defensible.

Expert Support

Gain access to the right experts when you need them whether onsite or remote.

“Typically for our clients, water processing utility costs are reduced 5-20% and water safety is quantitatively improved.”

Jay Reading, Vice President of Sales and Co-Founder of Phigenics

- Comprehensive system audits of potable and utility water systems focused on cost savings, water safety improvements, or both
- Creation, implementation and ongoing management of Hazard Analysis and Critical Control Point (HACCP) plans
- Compliance with new standards which are focused on preventing legionellosis from building water systems
- Evaluation of water treatment supplier performance
- Standardization and analysis of water treatment practices across multiple facilities
- Facilitation of evidence-based decision making for secondary disinfection needs and treatment options, specific for each building water system
- Analysis of validation and other data types to provide ongoing expert guidance
- Participation as a regular member of water management teams providing expert assistance when and where required

Phigenics does not sell water treatment equipment or chemicals and is not biased toward any particular water treatment technology or supplier.
