Mold Remediation of a Different Kind

More Economical - More Effective

Mold protein, whether alive and growing, dormant, or dead, is the health problem behind many symptoms and/or discomfort. Molds are found everywhere inside and outside and can grow on almost any substance when moisture is present.

The control plan is simple: *clean up the mold and get rid of the moisture*. Customary mold remediation is very expensive and is centered on bleach/demolition of your interior property and the use of harsh chemicals.

We have discovered a modern, scientific way to clean away mold without collateral damage to your property at a **fraction of the cost**.

Our Product: Beyond Green – Beyond Clean (M) is natural, green, environmentally responsible and completely safe for people and pets (no harsh, caustic or toxic ingredients).

It is an enzyme-based catalytic, and remains on the job long after application (bleach evaporates almost instantly) to provide long-lasting protection from further outbreaks.

Only enzyme products can be fogged. The practical advantage of fogging is that every surface in the house will be contacted. Over, under, around, behind, through, nothing escapes a fogging treatment

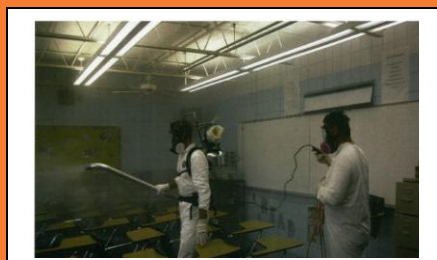

Beyond Green – Beyond Clean (M) is available in a do-it-yourself aerosol that enables the homeowner or property manager to approach the problem the same way a professional remediation contractor would fog a contaminated property.

Beyond Green – Beyond Clean denatures mold protein into its pre-protein components, amino acids and peptides, completely eliminating all allergenic potential.

Environkleen is an authorized distributor of Millman Systems Mold Product

The Best “One – Two” Punch vs Contamination:

1. Product M – eradicates and denatures the mold spores and bacteria, using laboratory testing as authentication.
2. Protect Plus™ Products shields your surfaces to help prevent the growth of mold, mildew, and other pathogens, using ATP surface swab testing apparatus.

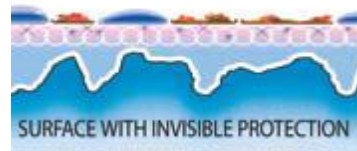

Product “M”

The only
do-it-yourself
mold/bacteria
fogger

Germ's Call Your Surfaces “Home Sweet Home”

PROTECT PLUS™ Surface Care: the only surface care technology that applies a barrier coating to protect the surface and reduce the adhesion and build-up of re-soiling and re-contamination in between cleanings.

PROTECT PLUS™ Surface Care is formulated for fast and effective results. This product is a treated article subject to 40 CFR 152.25(a). When used as directed, it is non-toxic and compliant with the Federal Hazardous Substances Act and the Consumer Product Safety Commission 16 CFR 1500 Guidelines (Earth Friendly)

**You can't just look at a surface
and say it's clean!**

Now...you can take the guesswork out of your cleaning program with **PROTECT PLUS™ Surface Care Products** and the **System Sure® Luminometer!**

ATP or Adenosine Triphosphate is the energy transfer molecule found in all living cells. Measure the amount of ATP on the surface and you can determine the surface pollution index.

**Call today to schedule a free
consultation on testing your surfaces
for ATP contamination and/or a
laboratory test for Mold infestation
