# HEALTH INFORMATION TECHNOLOGY

## CHALLENGE

Health Information Technology (HIT) is increasingly viewed as one of the most promising tools for improving the overall quality, safety, and efficiency of the Department of Veterans Affairs (VA) health care delivery system. Public and private health care systems, in addition to VA, are not only looking for ways to incorporate Health Information Technologies into their patient care programs and administrative processes, but also for ways to use HIT tools to foster collaboration among health care providers and to connect rural or remote patients to health care professionals.

## LEADERSHIP & EXPERIENCE

Atlas Research provides a unique combination of health care expertise and strategic partnerships with leading HIT systems integrators to improve the implementation of Health Information Technology, create an environment of connected health care, and promote the meaningful use of HIT Tools within the Department of Veterans Affairs (VA). The Atlas team has engaged in numerous HIT projects that demonstrate our expertise in this space. Key projects include:

- Providing lifecycle coordination, requirements development, and training assistance to VA's Connected Health Office for 75 web and mobile applications (including VA Blue Button) for VA staff and Veterans;
- Creating a Knowledge Management System for the Department of Veteran Affairs Office of Rural Health;
- Connecting VA and non-VA health care providers across vast geographic areas through the development of a web-based networking and social media pilot tool for the South Central VA Health Care Network (VISN 16);
- Designing and implementing strategies to enhance eligible enrollment in the VHA Personal Health record (My HealtheVet); and
- Collaborating with VA and Department of Defense representatives to develop interagency tools, processes, and IT solutions that will be implemented across both Departments to improve Wounded Warrior care management and transition.
- Assessing the responsiveness of the growing array of deployed VHA IT tools to stakeholders' needs, the agency's Office of Health Information engaged Atlas, and its partners Performix and Booz Allen, to field customer satisfaction surveys that focus on both VA health professionals and Veterans. The first of these evaluation efforts is assessing the recent implementation of new clinical decision support tools involving diverse mobile devices, providers and care settings.

Our experts have served in various roles with leading organizations promoting HIT, including the eHealth Initiative, the National eHealth Collaborative, the American Health Information Community, the HIMSS' Institute for e-Health Policy, and the American Telemedicine Association.
