- Remediation

Riding the wave of emerging technologies, nearly every industry is reinventing the customer experience—from providing mobile, anytime options to enabling personal, fast and convenient online service. People are used to having these options in their everyday life and expect the same cutting-edge service from our government.

>>> Information Technology

To achieve these services on time, on budget and consistent with cross enterprise intelligence, your IT system must be secure and holistic. Liberty designs, builds and maintains IT systems and applications that evolve your operational performance without losing sight of your people and processes. Considering the criticality of device-user interface, human factors engineering is an integral part of our integration methods to successfully prove the safety and efficacy of the systems released.

>>> Health IT

At its heart, health care is not about the gleam of brilliant technology – it is about getting a patient back to their work and family, safely, efficiently and in optimal condition. What the patient doesn't see are your challenges of rising costs, global governance reforms and compliance burdens. Liberty can enhance your care program in all areas from back office functions to electronic medical recordkeeping.

>>> Cyber Security

Effective management and protection of computing resources is critical to every organization's success. In the face of increasing cyber-attacks, basic compliance can no longer be the primary goal for any agency or organization. Effective Governance, Risk Management, and Compliance objectives (GRC) are the foundation from which agencies protect mission-critical computing resources. Liberty leverages decades of experienced and certified IT security staff coupled with cutting-edge tools to assess threats, minimize risks, and enable your pervasive technology requirements. Liberty effectively provides a continuum of cyber security services to clients managing IT assets across the globe.
