

Connecting Information. Serving Veterans. Amplifying Care.

Riding the wave of emerging technologies, nearly every industry is reinventing the customer experience — from providing mobile, anytime options to enabling personal, fast and convenient online service.

People are used to having these options in their everyday life and expect the same cutting-edge service from our government. Liberty's approach to supporting Federal clients is based on the concept of balance. We provide professional services to our clients founded on the understanding of the cultures of our clients. We respect the factors that drive our clients, and we keep risk mitigation and operational stability as key project indicators. Extremes of any type threaten the equilibrium of existing operations creating an unsteady foundation for the future.

Information Technology

- Enterprise Infrastructure Engineering
- Data Center Transformation
- Cloud Computing
- Mobile Computing
- Application Development
- Human Factors Engineering

To achieve services on time, on budget and consistent with cross enterprise intelligence, your IT system must be secure and holistic. Liberty designs, builds and maintains IT systems and applications that evolve your operational performance without losing sight of your people and processes. Considering the criticality of device-user interface, human factors engineering is an integral part of our integration methods to successfully prove the safety and efficacy of the systems released.

Health IT

- Health IT / Business Analytics
- Packaged App Integration
- IT Infrastructure Modernization
- Cloud / Mobility
- Privacy & Security
- Workflow Management
- Health Information Exchange

At its heart, health IT is not about the gleam of brilliant technology — it is about merging electronic medical record and claims/administrative data together to elevate the quality of services delivered for efficient, effective patient care. It is about getting a patient back to their work and family, safely, efficiently and in optimal condition. What the patient doesn't see are your challenges of rising costs, global governance reforms and compliance burdens. Liberty can enhance your care program in all areas from back office functions to electronic records and clinical workflow.

Cyber Security

- Policy / Process / Compliance
- Threat Assessment
- Info Protection / Prevention
- Incident Response
- Remediation

Effective management and protection of computing resources is critical to every organization's success. In the face of increasing cyber attacks, basic compliance can no longer be the primary goal for any agency or organization. Liberty leverages decades of experienced and certified IT security staff with cutting-edge tools to assess threats, minimize risks, and enable your pervasive technology requirements. We provide a continuum of services to clients managing IT assets across the globe.
