With over 40 years of network implementation experience and a large team of certified engineers and experts for design, installation, support and troubleshooting of wireless and wired networks of all sizes, Turn-key Technologies, Inc. provides an unbiased perspective on the most effective application of the right services and products for any company.

At TTI, we make wireless just as reliable and predictable as wired. When the network is designed to perform just like wired, adding mobile services that leverage the wireless network will increase overall productivity, security, asset utilization and safety, while lowering ongoing maintenance costs of traditional network designs.

TTI has extensive experience in infrastructure design and deployment, network assessments, virtualization, High Availability design, structured wiring, fiber deployments and the expertise to deploy a seamless network from the core to the edge. We provide initial consultations, systems design, system build and testing, system installation, peripheral integration, complete training and after sale service and support.

#### WHEN DESIGNING NETWORKS, OUR KEY CONSIDERATIONS INCLUDE:

- Scalability and future-proofing
- Roaming and user mobility
- Network access & security
- The types and number of devices the network will need to support
- Applications running on the network
- BYOD
- High density and high bandwidth locations

#### OUR SERVICES INCLUDE:

- Indoor and outdoor wireless including point to point, and point to multi-point
- Network design, switch configuration and network optimization
- Network assessments, site surveys and RF coverage validation
- Cloud services including wireless, security, storage, management and telephony
- Remote and on-site support
- Servers and storage
- Wired and wireless training
- Managed Services and service contracts
- High definition security cameras and access control
- VoIP telephone solutions
- Structured cabling, closet clean-up, and fiber/copper/power cabling products
