

Provider Workflow Optimization

An integrated system from analytics to workflows that assists in bringing clinical insights into the forefront of administrative processes from electronic medical records (EMRs)

Provider Workflow Optimization is focused on making provider and consumer collaboration more about clinical improvement than administrative process

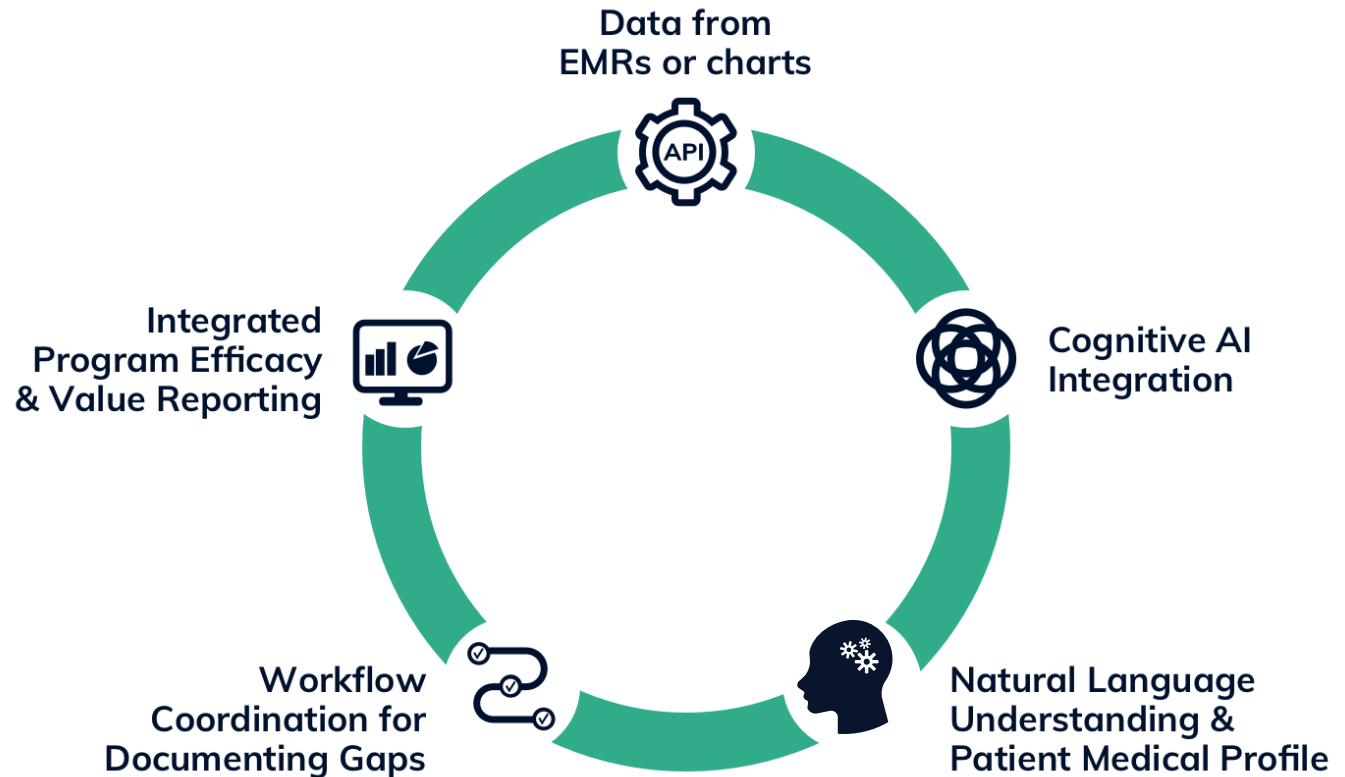

1. Interoperable messages across all specialties that leverage our **knowledge repository to guide clinical management**
2. Provides integrated clinical workflow management on a single page that gives the **right level of information to assure quality**
3. Self-service digital forms **save time and reduces errors** by integrating with each consumer's medical record and alerts into a unified view across all payers

Comprehensive health modules are the primary drivers of administrative processes, augmented by Cognitive Artificial Intelligence (AI), so all your care can be accessed through one system

Integrated workflow from data acquisition to value creation

Gain more control over your EMR, get efficient clinical processes and insights

Convenient

Interactive modules **work within your EMR** or on any device

Providers can **easily see the profile of a consumer's health** to address gaps in care

Real-time alerts work with AI to make sure information is presented in a timely manner

Consumer's medical record is part of a **connected experience post-visit**

Efficient

Integrated scheduling at the point of care **reduces wait times**

Treatment pathways assure **alignment to clinical standards** in each practice

Workflow management gives **an accurate picture of health** and efficiency in admin

Supportive

Automated reminders and alerts are **supported by evidence-based medicine**

Analytic transparency provides full explainability to all clinical alerts

Personalized **educational resources** help consumers make more informed health decisions and follow prescribed care plans
